

Better Business Through Technology.

StreamLogic Inc. is a Microsoft Certified information technology consulting firm specializing in business process improvement, technology integration, custom software development, and workplace collaboration solutions. StreamLogic can help your organization align technology with business goals, then design and implement complete solutions to help your business run better, prosper, and grow.

At StreamLogic, we provide more than just great service. We work as a part of your team, taking the time to learn what is important to your business. By understanding how you measure success, we are able to offer customized technology solutions that help your organization operate more effectively, better utilize your technical resources, and spend less money.

Our core business is built around the following areas of technology:

- *Business Process Automation (BPA) / Business Process Reengineering (BPR)*
- *Software Development and Customization*
- *Technology Integration and Optimization*
- *Workplace Collaboration Solutions*

Using a combination of the latest technologies and process improvement best-practices, we enhance your business and create a positive impact on your bottom line - and that makes us one great partner.

Working for Your Success.

We understand that every organization is unique. That's why we make it our first priority to understand your company's business goals, and develop custom solutions to assist you in achieving them.

By combining years of technical experience with the basic principles of organizational efficiency, StreamLogic takes a one-of-a-kind approach to technology consulting. Instead of applying an off-the-shelf solution that may hinder operational processes, we use our Ownership Approach™ to ensure that every solution we recommend is tailored to your needs and supports your business.

"Thanks for taking charge of the development for our new Project Management system on SharePoint®. Your contribution will revolutionize the way our company operates and save us countless hours. Further, I truly appreciated your professionalism; in particular, your proactive, process-oriented approach to solving our problems, and your extremely detailed documentation. Do you know that this is the only time I've ever gotten documentation from an IT professional? I love it. What a difference to finish an IT project and actually KNOW what happened and how to use it! You have my highest recommendation, personal thanks, and wishes for continued success."

- David Worrell, CFO, Board Member, AmeriStart/Pharma Services Network, Inc.

It's About Time.

StreamLogic works hard to fully understand your unique business needs and make recommendations that will help maximize your success. Whether enhancing existing systems or developing new ones, we strive to boost your bottom line by gaining technology efficiencies that will help you achieve your business goals.

Business Process Automation (BPA) / Business Process Reengineering (BPR)

StreamLogic helps businesses analyze their current business processes, determining where manual processes can be automated or improved to create efficiency gains. After spending time on-site to understand the people and processes within a company, we look for cumbersome and non-essential activities that can be automated or removed. This reduces costs and the potential for human error, while increasing service delivery and overall customer satisfaction.

Software Development and Customization

StreamLogic designs and develops custom software applications that support business processes and help organizations perform better and with greater efficiency. Off-the-shelf software often doesn't support the unique needs of an organization, so custom software is written to fully support and enhance the existing business process and strategy. This includes design and development from scratch, or modifying existing applications to better support the business needs.

Technology Integration and Optimization

By using customized technology strategies to integrate disparate systems within an organization, we enable disconnected business processes to communicate more efficiently. This is most often utilized to reduce manual data entry and human errors, and streamline overall operations.

Workplace Collaboration Solutions

This consists of architecting and implementing collaboration solutions based on Microsoft® SharePoint® technologies that support and enhance business processes. These collaboration solutions also help connect remote offices and field users, while increasing data and knowledge sharing within an organization. Typically, document management is also part of these solutions, which helps move documents and information from a user's desktop and shared drives to a central repository where the entire organization can access and collaborate on real-time data

The StreamLogic Guarantee.

Because we believe so strongly in our ability to provide solutions that will help you achieve your business objectives, we offer The StreamLogic Guarantee™. If you aren't completely satisfied with our work, we'll do anything within reason to make it right, or refund to you a portion the project fees. It's very simple to us: If we don't stand behind our work, why should you?

Call StreamLogic today or visit www.StreamLogicInc.com to find out how we can put technology to work for your organization.
